DISPLAY ADS

ANIMATION: 15 seconds max within ad units without being reinitiated by user.
FILE FORMATS: JPG, PNG, GIF (static or animated), HTML5, Third Party Ad Tags**
HTML5 BEST PRACTICES:
(Best practices provided in more detail in IAB's
"HTML5 for Digital Advertising")
HTML5 ads are like mini web pages. You can improve initial display by following a few guidelines:
• Provide inline CSS and use HTML to deliver initial display resources as much as possible
• Limit initial dependencies on any render-blocking .js or .css
• Load interactive elements as a deferred or secondary subload, but keep them efficient using techniques such as caching.
• Defer heavy file weights until user initiates interaction.
• Use techniques such as byte-serving to download partial content and to optimize for auto-play video.
• Avoid any unnecessary downloads.
• Prevent delays. **Test your HTML5 creative with this easy tool.**

All components of display ads, including creative, tracking and 3rd party tags, must be able to serve via SSL (https://).

BORDERS REQUIRED!
Any ads featuring a white background are required to have a 1 pixel grey border (#CCCCCC ONLY) around the perimeter of the ad in order to separate it from page content.

RICH MEDIA (blue shaded ads)

ANIMATION
WITHIN AD UNITS: 15 sec max length (unlimited user initiated), 1.1 MB max file size for host-initiated video(unlimited user initiated)
BILLBOARD: 30 sec max length (unlimited user-initiated) 2.2 MB max file size for host-initiated video (unlimited user-initiated)
MAX VIDEO & ANIMATION FRAME RATE: 24 fps
**3rd party ad tags are accepted, provided the ad already functions correctly as rich media (expands/contracts, working close button, etc.).
PUSHDOWN ADS will expand/contract on click.
ADHESION ADS will feature a prominent close button in the upper-right corner. All ads must load muted; user-initiated sound on click only.

IN-AD VIDEO SPECS
